

IAC Earns ISO 9001:2008 and 27001:2005 Certifications

OCTOBER 17, 2013 | The Intersocietal Accreditation Commission (IAC) has earned certification for compliance with the International Organization for Standardization (ISO)'s 9001:2008 and 27001:2005 standards.

According to Geoffrey A. Rose, MD, FACC, FASE, IAC Chairperson, "Just as IAC accreditation demonstrates to the outside world a facility's commitment to quality and quality improvement, so ISO certification demonstrates IAC's commitment to a disciplined approach in assaying that quality and protecting that information."

Upon completion of an extensive systems evaluation, IAC now possesses certification and is designated as a quality certified organization in two specific areas:

- ISO 9001:2008, Quality Management System certification assures the incorporation of a process approach when developing, implementing and improving the effectiveness of a quality management system designed to enhance customer satisfaction. It includes obtaining the results of process performance and effectiveness, and continual improvement of processes based on objective measurement.
- ISO 27001:2005, a rigorous certification for information security management, defines the information security controls and other forms of risk treatment required to prevent and defend against potential data system vulnerabilities. The certification ensures that the information security controls continue to meet security needs on an ongoing basis.
