

## IAC Announces Changes to Case Study Requirements

---

DECEMBER 2011 | Effective immediately, the IAC has changed the requirements for submitting case studies when applying for vascular testing accreditation. Several enhancements to the Online Application have allowed the IAC to accept fewer case studies from applicant facilities as well as provide the capability for facilities to upload all required attachments including final reports and worksheets into the application. The IAC is pleased to announce the following changes to the case study requirements:

- The IAC has decreased the total number of required cases that must be submitted. Each laboratory is now required to submit three abnormal cases of varying degrees of pathology in each area the laboratory is applying for.
- All facilities will now submit the same amount of cases whether applying for IAC accreditation for the first time or for reaccreditation.
- Facilities are now required to upload all final reports and worksheets to the Online Application.
- All medical and technical staff must be represented at least once before repeating.
- The Technical Director and Medical Director must be represented

To view the case study requirements in their entirety, please visit the Case Studies section of the website at [www.intersocietal.org/vascular/seeking/case\\_studies.htm](http://www.intersocietal.org/vascular/seeking/case_studies.htm).
